What Abiraterone Acetate is Used For:

Abiraterone acetate is indicated for use in combination with prednisone for the treatment of men with metastatic castration-resistant prostate cancer who have already received prior chemotherapy containing docetaxel.

Note: If a drug has been approved for one use, physicians may elect to use this same drug for other problems if they believe it may be helpful.

How Abiraterone Acetate is Given:

Abiraterone acetate is a pill, taken by mouth. It is taken once a day.

It must be taken on an empty stomach [2 hours after a meal, or one hour before]

It should be taken at approximately the same time each day.

Prednisone [10mg daily] should be taken along with abiraterone acetate.

The amount of abiraterone acetate you receive depends on many factors. Your doctor will determine your dose and schedule

Abiraterone Acetate Side Effects:
